

ID Code Guide for Projects, Products, Parts

To promote ABC Analysis and identify contextual use of parts and the like.

For each ID code, include a designator A, B, or C.

'A' may be implied for ones with organization's vendor code.

'C' may be implied for ones with a category as vendor code.

'B' may be implied for all other cases.

A Assembled (ultimately). Each one:

- has a vendor associated with it
- has a product code
- has a unique product ID code or serial number
- has a design managed by a change configuration system
- has a reference indicating version/template used
- may be alteration of a bartered item
- may be manufactured or assembled internally or by a vendor

B Bartered. Each one:

- has a vendor associated with it
- has a product code
- has not been modified after release from vendor
- may be bought for re-sale
- may be a component used in an assembly

ID code consists of Vendor reference – Part number or an industry wide reference (UPC/ISBN etc)

C Common. Each one:

- is known by its identifier and common spec
- may have unknown or unknowable OEM
- has not been modified after release from vendor
- may be bought for re-sale
- may be a component used in an assembly

ID code consists of a (category code -) identifier - specifications and may have cross references to specific ID Codes (A,B, or C)

Notes:

A category classifies what each item is.

A department classifies a way that item are used.
